## Machines At Work

### Work, Power, & Machines

Machines A device that makes work easier A machine can change the size, the direction, or the distance over which a force acts Forces involved: Input Force  $F_I$  Force applied to a machine Output Force  $F_O$  Force applied by a machine Two forces, thus two types of work Work Input

### Work, Power and Machines

9/22/2014 2 Work • What is work? • To a scientist work is done when changing motion • Work is force applied multiplied by the distance the force acts • Only if the force and the direction are the same • Work is zero when an object is not moving Work • When an Olympic weight lifter presses a barbell over his head • When he has to hold it there until the judges say he can

### 5.1 Work - Weebly

Machines make doing work easier by changing the force needed to do the work 51 Work Work is done when a force causes some-thing to move 52 Using Machines A machine can change the force needed to do a job, but it can't reduce the amount of work needed 53 Simple Machines Compound machines are made from six types of simple machines Work with Me

### Simple Machines

Simple Machines: Introduction (continued) What does "work" mean in science? Simple machines all require human energy in order to function "Work" has a special meaning in science "Work" is only done when something is moved For example, when you push on a wall, you actually are not doing work, because you cannot move it Work consists of two
